

## **WP Developments 2C install instructions**

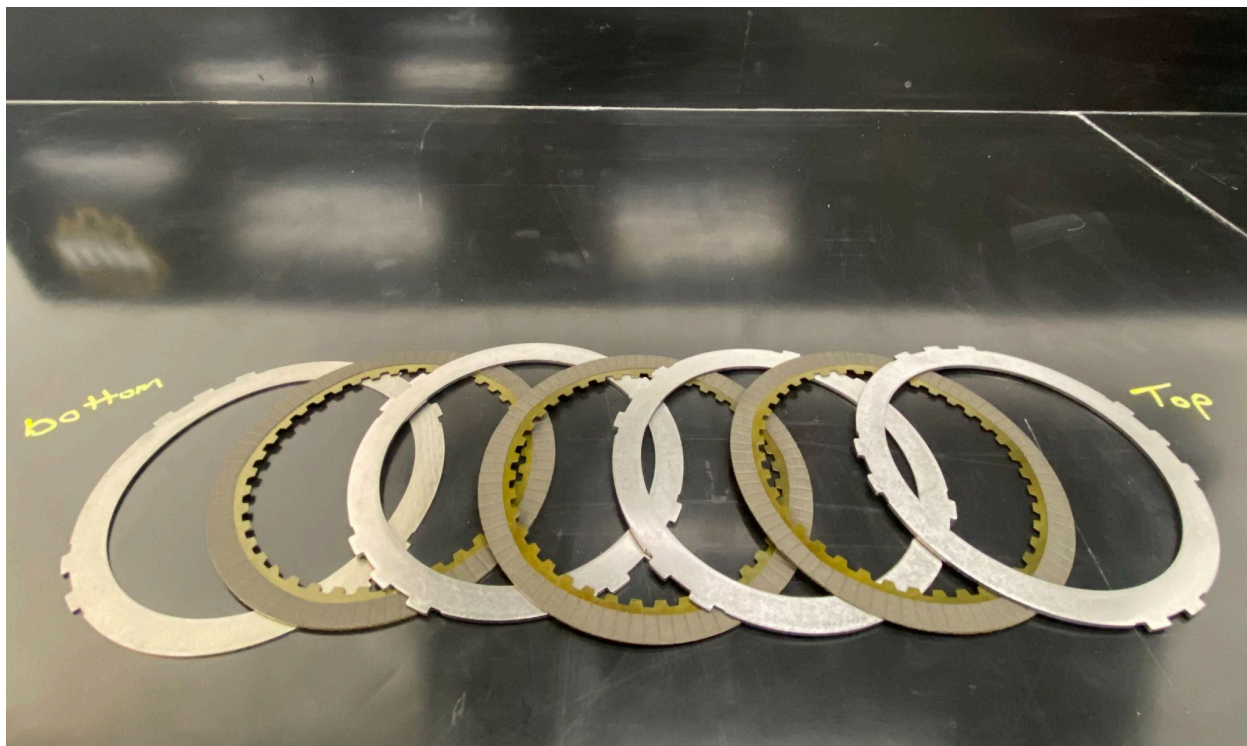

Thank you for your purchase with WP Developments! The 2C stack up we designed is engineered to never allow the friction to fall below the 2C reaction planet. We do this with a custom thickness 2C billet piston and thin steel added into the stack up.

### **Stack Order**

- 1. Thick factory reaction plate in the case as normal.**
- 2. .062 (sometimes this can be a.068 but the piston will be machined to match the thickness) steel**
- 3. Friction**
- 4. Steel**
- 5. Friction**
- 6. Steel**
- 7. Friction**
- 8. Ending on a steel**
